

Aquatic Therapy

Easterseals Joliet Region, Inc.

Aquatic therapy provides a unique setting for occupational and physical therapists to work 1:1 with your child. Aquatic therapy is a great way to improve strength, endurance, balance and motor planning for children of a variety of ages and diagnoses. In order to participate in aquatic therapy, your child must have therapeutic goals that can be addressed by a physical or occupational therapist in the pool. A screen may be required in order to determine the appropriateness of your child for aquatic therapy. It is a possibility that aquatic therapy may not be the best way to address your child's goals. If you are interested in aquatic therapy, please contact Easterseals Joliet Region, Inc. for additional information.
