

MAKE THE FIRST FIVE COUNT[®]

We're facing a national crisis...

2 of them are at risk for a developmental delay.

That's **5 million** kids at risk. But last year only **1,077,081** received early intervention services.

Babies, toddlers and kindergarteners are falling through the cracks in **all 50 states.**

1 in 5 households with children have a child with a special healthcare need.

Every year, **1 million kids** enter school with an undiagnosed disability.

That is the equivalent of **13,333** full sized school buses full of children.

While a child can be diagnosed for autism as early as age 2, most children aren't diagnosed until age 4.
