

Intake | Screening | Comprehensive Diagnostics for Autism Spectrum Disorder (ASD)

Black children are less likely to be diagnosed with Autism Spectrum Disorder than white children, yet the prevalence of a developmental disability is higher among low-income minority children.

Early detection for ASD is the key for positive long-term outcomes!

The Autism Program (TAP)

The Easterseals Black Child Fund with generous support from Abbott

The Autism Program (TAP) at Easterseals serving Chicagoland and Greater Rockford is providing intake, screening, and comprehensive diagnoses for black children residing in Lake, Winnebago, Boone, Stephenson, JoDavies, McHenry, Northern Ogle, and DeKalb Counties at no charge.

Provided at no cost to black children ages 3-12.

Call today for a screening.

Based on screening results, children may receive full diagnostics.

Our screening and diagnostic team and process is made up of professionals who will use standard assessments to determine if your child meets criteria for autism spectrum disorder.

Our goal is to provide young people with diagnostics for early detection of ASD.

Early detection is the key for success in achieving the best outcomes for your child!
